TITLE : TELEPHONE SET

**ABSTRACT :** PURPOSE: To easily recognize a called party by turning on a light emitting element corresponding to the telephone number when an inputted telephone number and the stored one are coincident.

**CONSTITUTION:** When ring signals and telephone number data are inputted from a telephone line 1, a telephone number detection circuit 4 detects the telephone number data and whether or not the telephone number and data stored in a storage means 9 are coincident is compared. In case of noncoincidence, a control means 13 controls a calling sound generation means 16, generating a calling sound. In case of coincidence, the control means 13 reads the position data of the switch of a one-touch dial section 20 stored with the telephone number, turning on and off the light emission element located at the switch. In short, when a call comes from Mr. B, the light emission element located at the switch with the name of Mr. B is turned on and off. In case a caller hangs up the call during the absence or the like, the control means 13 turns on and off the light emission element in succession.
